Accessibility Questions:
1. What corrections did you have to make?
    a. The major correction I had to make was adding captioning to all of the images. For every image on the site, I added an "alt" tag that described what/who was in the image. I also added "aria-labels" to the play, rewind, and fast forward buttons on the bottom of the page that dictate their functionality.
2. Do you think your website is usable if you turn off CSS? Why or why not?
    a. At first I assumed it would not be usable because so much of the site's functionality is influenced/made clear by its design. However, in terms of usability, I do think the site would be usable without CSS. All of the usable functions, including the accessibility corrections, are in the HTML code itself and not in the CSS styling. Therefore, the page would be usable, but it would appear very disorganized and may be difficult to navigate.
3. Is your site tabbable? In other words, without the use of the mouse, are all the links and buttons accessible using the tab keys?
    a. Yes, the user can navigate through my site with their tab key and without their mouse.
